### The pairwise relative semivariogram

#### Edzer Pebesma

Aug 29, 2011

#### 1 Introduction

The general relative variogram (Deutsch and Journel, 1997) is defined as

$$\gamma(h) = \frac{1}{2N_h} \sum_{i=1}^{N_h} \left( \frac{2(Z(s_i) - Z(s_i + h))}{Z(s_i) + Z(s_i + h)} \right)^2.$$

It is claimed to reveal spatial structure (correlation) better when data are skewed and/or clustered. The data set used in this vignette, cluster.dat from the GSLIB distribution, seems to confirm this.

As of version 1.02, R package gstat provides computation of the pairwise relative semivariogram. The following code provides an example and verification of the computation.

The following code imports the cluster.dat data from GSLIB, which has been converted to have a single-line header containing column names, packaged with the R gstat package, and converts it into a SpatialPointsDataFrame object:

- > library(gstat)
- > cluster = read.table(system.file("external/cluster.txt", package = "gstat"),
- + header = TRUE)
- > summary(cluster)

| X             | Y             | Primary        | Secondary       |

The following commands specify a sequence of lag boundaries that correspond to the GSLIB conventions, and compute a regular variogram using these boundaries:

```
> bnd = c(0, 2.5, 7.5, 12.5, 17.5, 22.5, 27.5, 32.5, 37.5, 42.5,
      47.5, 52.5)
> variogram(Primary ~ 1, cluster, boundaries = bnd)
                     gamma dir.hor dir.ver
                                              id
             dist
    np

6 1367 25.020160 48.60365
                                 0
                                         0 var1
7 1311 29.996102 46.88879
                                 0
                                         0 var1
8 1085 34.907219 44.36890
                                 0
                                         0 var1
   904 39.876469 47.34666
                                 0
                                         0 var1
   611 44.716540 38.72725
                                         0 var1
```

To compute the relative pairwise variogram, the argument PR needs to be set to TRUE:

0 var1

> variogram(Primary ~ 1, cluster, boundaries = bnd, PR = TRUE)

|    | np   | dist      | gamma     | dir.hor | dir.ver | id   |
|----|------|-----------|-----------|---------|---------|------|
| 1  | 149  | 1.527974  | 0.3608431 | 0       | 0       | var1 |
| 2  | 624  | 5.472649  | 0.6307083 | 0       | 0       | var1 |
| 3  | 989  | 10.150607 | 0.8376443 | 0       | 0       | var1 |
| 4  | 1249 | 15.112173 | 0.7769083 | 0       | 0       | var1 |
| 5  | 1148 | 20.033244 | 0.8774599 | 0       | 0       | var1 |
| 6  | 1367 | 25.020160 | 0.8961016 | 0       | 0       | var1 |
| 7  | 1311 | 29.996102 | 0.9002297 | 0       | 0       | var1 |
| 8  | 1085 | 34.907219 | 0.9604305 | 0       | 0       | var1 |
| 9  | 904  | 39.876469 | 0.9055426 | 0       | 0       | var1 |
| 10 | 611  | 44.716540 | 0.7554474 | 0       | 0       | var1 |
| 11 | 219  | 49.387310 | 0.8226759 | 0       | 0       | var1 |

Figure 1 shows the two variograms, as plots, side by side

## 2 Verification with plain R code

The following R code reproduces the relative pairwise semivariogram values for the first three lags, i.e. 0-2.5, 2.5-7.5 and 7.5-12.5.

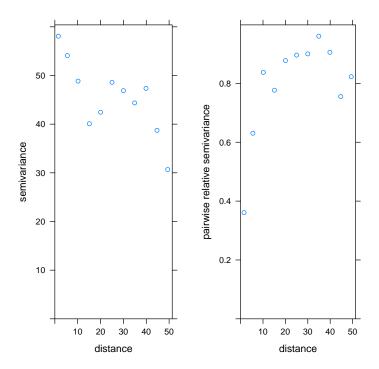

Figure 1: Regular variogram (left) and pairwise relative variogram (right) for the GSLIB data set  ${\tt cluster.dat}$ .

```
> z = cluster Primary
> d = spDists(cluster)
> zd = outer(z, z, "-")
> zs = outer(z, z, "+")
> pr = (2 * zd/zs)^2
> dim(pr)
[1] 140 140
> prv = as.vector(pr)
> dv = as.vector(d)
> length(dv)
[1] 19600
> length(prv)
[1] 19600
> mean(prv[dv > 0 \& dv < 2.5])/2
[1] 0.3608431
> mean(prv[dv > 2.5 \& dv < 7.5])/2
[1] 0.6307083
> mean(prv[dv > 7.5 \& dv < 12.5])/2
[1] 0.8376443
```

### 3 Verification with GSLIB

In a verification with the GSLIB (Deutsch and Journel, 1997) code of gamv, the following file was used:

```
Parameters for GAMV *********
```

```
START OF PARAMETERS:
../data/cluster.dat
file with data
1 2 0
columns for X, Y, Z coordinates
1 3
number of varables,column numbers
-1.0e21 1.0e21
trimming limits
gamv.out
file for variogram output
10
number of lags
```

```
5.0
lag separation distance
2.5
lag tolerance
1
number of directions
0.0 90.0 50.0 0.0 90.0 50.0
azm,atol,bandh,dip,dtol,bandv
0
standardize sills? (0=no, 1=yes)
2
number of variograms
1 1 1
tail var., head var., variogram type
1 1 6
tail var., head var., variogram type
```

Running this program with these parameters gave the following output:

| Semiva                        | ariogram   | tail:Prim  | nary   | head:Primary   | direc-   |
|-------------------------------|--|--|--|--|--|
| tion                          | 1  |  |  |  |  |

As can be seen, the values correspond to the output generated by variogram of package gstat.
